

Introducing Office 365 Backup and Migration

Migrating to Office 365 allows you to scale your infrastructure, control your business costs, and most importantly implement remote workplaces effectively and securely. By taking advantage of Microsoft's flagship Software-as-a-Service product, workforces can now readily access files at any time or place, protect against disaster scenarios like outages and floods, offer work-from-home solutions, and explode in productivity. CloudOnSync offers customers the ability to migrate their workplace environments to Office 365, letting you access important documents, spreadsheets, and e-mails on the cloud quickly and easily.

FEATURES AND BENEFITS

- Provide flexible and scalable access to your company's documents and files, anytime and anywhere
- Subscription-based payment - Reduce costs by paying only for what you need
- Simple to use and familiar Microsoft software, enhancing productivity
- Enables work-from-home and makes online collaboration simple and straightforward
- Takes the best security measures to protect data and safeguard important files
- Avoid the pain of updates and migrations - O365 is self-managing and non-intrusive
- Integrate with Azure AD for fine-grained control and advanced features

HOW IT WORKS

- Our team runs an on-site discovery involving a kick-off meeting, collecting environment info, and planning user experience.
- Your O365/Exchange platform and cloud infrastructure are prepared by us, with everything from physical connectivity to subscriptions being managed.
- We initiate data migration and closely monitor the process, keeping you updated the whole way through.
- Our team trains your end users and provide relevant documentation to ease the transition to O365.
- After migration has been completed, our specialist will be in constant communication to ensure that the process has run smoothly and any concerns are addressed.
